Total Time: 10 min **Total Marks: 10**

Roll#: 25F-0755 **Name:** Muhammad Taha **Section:** BCS 1B

Q1. CLO1 **05**

Write the equivalent ternary operator statement for the following given if-else statement, if it can be.

```
if (x > y + z)
{
        if (u < m)
                n = 100;
        else
                n = 120;
}
else
        if (m > u)
                n = 310
else
        n = 250;
```

n = (x>y+z)?((u<m)?(100):(120)):((m>u)?(310):(250));

5

Answer: n = (n>y+z)?((u<m)?(100):(120)):((m>u)?(310):(250))

Q2. CLO1 **05**

Write down the equivalent if else structure to replace the given switch. Use Logical operator where required.

```
char option;
cin >> option;
switch (option)
{
case 'a':
case 'A':
        cout << "Hello";
case 'B':
        cout << "There";
        break;
case 'b':
        cout << "Take care";
        break;
default:
        cout << "Bye";
}
```

Answer:

```
if(option=='a' || option=='A')
    cout << "Hello" << endl;
    cout << "There";
Else if (option==='B') ~~|| option==='b'~~
 cout << "There";
Else if (option == 'b')
        cout << "Take care";
Else
   cout << "Bye /n";
```
